

Oracle Fusion: New Year Setup Checklist

Before the year starts

- ☐ Extend the accounting calendar on every ledger (incl. adjustment period)
- ☐ Extend the budget calendar (separate from accounting calendar)
- ☐ Create new journal/reporting sequence versions (gapless statutory)
- ☐ Create document sequences + category assignments (AP, AR)
- ☐ Fixed Assets: asset fiscal year, depreciation calendar, prorate conventions
- ☐ Keep the asset fiscal year at least one year ahead
- ☐ Create and load the new year control budgets (budgetary control)
- ☐ Plan encumbrance carry forward of open commitments (if used)
- ☐ Copy GL periods into the cost/inventory calendar

At the rollover

- ☐ Open the first period of each ledger (year-end roll happens automatically)
- ☐ Open each subledger separately (AP, AR, Assets, Cash Management)
- ☐ Open cost/inventory periods (only after matching GL period is open)

Owned by specific teams

- ☐ Final depreciation + asset period close (asset/finance users)
- ☐ Tax rate changes (tax team, only when the authority issues them)
- ☐ Period opening (GL team)

Commonly missed

- ☐ FA fiscal year stops at upcoming year -> depreciation fails
- ☐ Budget calendar extended but control budgets not loaded
- ☐ Missing journal sequence version or document sequences
- ☐ Subledger periods forgotten (GL period looked healthy)
- ☐ Withholding tax calendar missing the new year
