

Oracle Fusion: User Inactivation Checklist

Assess each account before inactivation (highest risk first):

- ☐ 1. Active scheduled processes (ESS_REQUEST_HISTORY, states 1-4)
- ☐ 2. BPM worklist pending tasks (named approver accounts)
- ☐ 3. BPM approval groups (sole-member dead ends)
- ☐ 4. BPM approval rules (named user references)
- ☐ 5. BI catalog ownership (transfer before inactivation)
- ☐ 6. Integration / web service credentials (confirm with OIC team)
- ☐ 7. Open transactions (stale state)

For pure implementation accounts, focus on checks 1, 5 and 6.

Resolution sequence

- ☐ Reassign sole-submitter scheduled processes to an active account; test
- ☐ Cancel remaining jobs explicitly (Tools > Scheduled Processes)
- ☐ Transfer BI catalog ownership (Set ownership of item and all subitems)
- ☐ Confirm no OIC/external connection uses the account credentials
- ☐ Inactivate via Security Console; document date + checks (audit trail)

Tip: read ASE_USER_LOGIN_INFO (human logins) and FND_SESSIONS together.
